

Representation Terms

Name	Definition
Address	This is not a formatted attribute; each portion of an address would require a separate attribute (e.g., Applicant Street Address).
Amount	Monetary amount.
Code	An attribute which is represented by a coded field. A code is made up of alphanumeric characters, and has associated descriptions for each code value.
Date	Calendar date. The format standard is MMDDYYYY.
Description	The free-form (or domain controlled values) textual explanation or comments that describes a person, thing, or event.
Identifier	An artificial, system-assigned number which identifies a unique occurrence of an element.
Measurement	Gauged or scaled extent, capacity, dimension, or frequency. Use when a unit of measurement is clearly specified or identified.
Name	Name of a person, place, or thing. This is not a formatted attribute; each portion of a name would require a separate attribute (example: Applicant First Name).
Number	An alphanumeric non-system identifier (e.g., 182B, UTU12345). Non-computational numeric data. (e.g., 142 as an Applicant Street Number.)
Percent	Numeric data that represents a percentage or ratio.
Quantity	A numeric, non-monetary sum or count.
Time	Time of day. The format standard is HHMM (24 hour clock).
Text	Data having an unstructured content.
Year	Calendar year unless fiscal is specified.
